Analyzing social networks in the European Parliament, and changes in the social network over time

BERNÁT Ádám, MARITS Márton

Abstract—**We did a couple things to some graphs which contained data about social networks in the European Parliament.**

Index Terms—Social networks, European Parliament.

I. INTRODUCTION

In this section, we introduce what the hell we're even talking about, we cite a couple earlier papers which we definitely read and got inspired from, we talk about previous results and so on.

We then talk about how the paper itself is organized, and very lengthily talk about whan kinds of stuff is contained in each section. This is of course for the reader's convenience, and definitely not an attempt to make this paper longer than it should be.

II. OUR DATA

Our data was acquired from blah blah blah...

III. PRELIMINARY ANALYSIS

In this section, we talk about the conclusions we can draw from the data while analyzing it in its entirety.

IV. CHANGES TO THE SOCIAL NETWORK OVER TIME

In this section, we talk about how we divided the data based on time.

We divided our data based on time. Our goal was to make it possible to analyze the changes in the social environment based on time. We used major events that shaped European politics as breakpoints, because we expected that the social network might change drastically as a result of these events. The most important events we considered were the United Kingdom leaving the European Union (Brexit), on February 1st 2019, and the start of the Russian invasion of Ukraine on February 24th 2022. These events have undoubtedly shaped public opinion, and our research is centered around finding out whether they also influenced the social structure of the European Parliament.

V. CONCLUSION

The conclusion goes here.
